

SALES & LEDGER ANALYTICS • BUSINESS CENTRAL
AI ASSISTANT

Ask your ERP a question. Get an answer.

Sales & Ledger Analytics sits inside Business Central and answers plain-English questions about customers, payments, overdue balances, and sales volume — no report builder, no export to Excel.

ANSWERS QUESTIONS ON

Customers

Payments & overdue

Aging

Sales

Sales volume

Inventory

HOW IT WORKS

Ask question in simple English

No exports, no separate login, no waiting on finance — Sales & Ledger Analytics lives inside the Business Central screens your team already has open.

"Show overdue amounts past 30 days"

Type a question in everyday language and get an answer pulled straight from your customer ledger — not a static, pre-built report.

NATURAL LANGUAGE QUERY

"Rate customers by payment and volume"

Collections risk and top accounts surface automatically, so you're prioritizing follow-ups before they turn into write-offs.

PAYMENT & AGING INSIGHT

"Customer aging by exact number of days"

Every answer opens back into the underlying Business Central record — no re-keying figures into a separate BI tool to check the source.

NATIVE TO BUSINESS
CENTRAL

"Which SKUs are turning slowest?"

Inventory turnover — and many more questions beyond AR and sales — are answered the same way, right from the same chat.
